The image displays two overlapping screenshots of the Databricks Unity AI Gateway interface. The top screenshot shows the 'dais2026.cloud.databricks.com' URL and the 'Unity AI Gateway' dashboard. The dashboard includes sections for 'Agent Integrations' (listing Codex, Cursor, Gemini, and Other Integrations), 'Featured models' (listing GPT-5.5, Claude Opus 4.7, Gemini 3.5 Flash, and GPT OSS 120B), and 'Fastest response' and 'Highest Traffic' metrics. A green callout box with an arrow points to the 'Highest Traffic' section, stating 'powered by Unity AI Gateway'. The bottom screenshot shows the 'caspers-ops.databricksapps.com' URL and the 'Operational Dashboard' for 'Casper's Kitchens'. This dashboard includes a 'REVENUE PERFORMANCE - CURRENT VS PRIOR PERIOD' chart showing revenue for Chicago, San Francisco, Bellevue, Sil. Valley, London, Amsterdam, Munich, and Varen. It also features a 'LOCATION HEALTH MAP' and a 'CEO Intelligence' section with 'LATEST COMPLAINT DECISIONS'. A green callout box with an arrow points to the 'Supervisor Agent' section in the 'SYSTEM INFO' sidebar, specifically to the 'mas-3b98092e-endpoint'.

DATABRICKS DEMO
NOT A REAL COMPANY

CEO Intelligence

This is an exceptional operational performance indicator. However, I recommend verifying that our complaint tracking system is properly capturing customer feedback across all channels (in-app, phone, email, delivery platforms) to ensure this reflects reality rather than a data collection gap.

what are the complaints our customer have?

You

AI

Customer Complaint Overview:

Bellevue is the critical outlier with a 21.93% complaint rate (4,227 complaints from 19,276 orders) — nearly 3× higher than any other location.

Other locations by complaint rate:

- **Munich:** 8.73% (169 complaints)
- **London:** 7.77% (183 complaints)
- **Vianen:** 7.73% (89 complaints)
- **San Francisco:** 7.56% (1,509 complaints)
- **Amsterdam:** 6.56% (143 complaints)
- **Silicon Valley:** 4.37% (359 complaints)
- **Chicago:** 0% (zero complaints from 24,247 orders)

Key findings:

1. All complaints are categorized as "order_created" type, suggesting issues during order initiation/processing
2. Chicago's zero complaint rate from the highest order volume (24,247 orders) indicates exemplary operations
3. Bellevue requires immediate operational review — the 22% complaint rate represents significant customer dissatisfaction and potential revenue risk

Recommended action: Investigate Bellevue's order creation workflow, kitchen operations, and customer communication processes. Consider replicating Chicago's operational practices across other locations.

Which items generate the highest total gross revenue?

Ask + Run

Reset

Which brands contribute most to total gross revenue?

How does daily revenue trend over time overall?

Which items have high revenue but low units sold?

Sample Data Explorer

To identify which items generate the highest total gross revenue, we should aggregate revenue at the item level across all available gross_revenue. This helps pinpoint your top-performing products by overall sales value rather than just a single day's performance. The query below sums gross revenue per item_id, orders items from highest to lowest, and returns the top 10, which you can adjust with the LIMIT clause as needed.
